

Silo's:

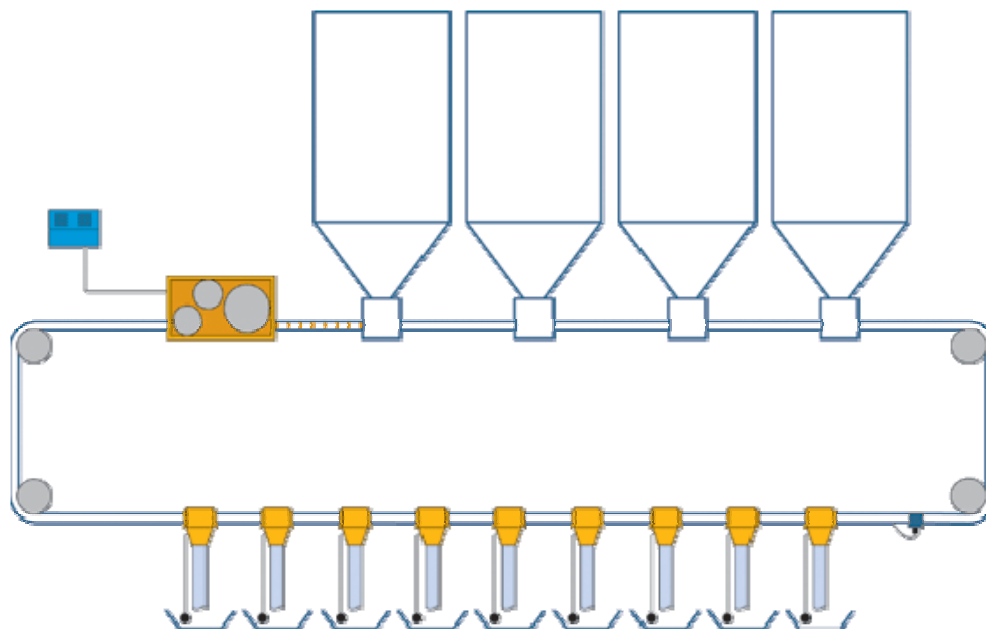

AQS distributions system:

System with 1 pulling station

Multifase sensor feeding

LSG 63 Pulling station

Power full Pulling station for 63mm pipe system. The self cleaning cabinet will automatically take out any feed leftovers.

The Pulling station is mounted with the patented drive wheel that provides a gentle power transmission to the feed distribution wire.

Elbow's

All elbow has ball bearings and stainless steel screws and nuts, which gives you trouble free operation. The covers are made of plastics.

Multimix Fish Tank Feed outlet valve

Robust Feed outlet valve. A clean light indicator shows if the valve is closed or open.

Multimix valve with sensor

Multimix valve with sensor only allows feeding when feed is needed in the hopper. The sensor registers if there is feed left in the hopper. The signal is lead to the control system of the Feed distribution system which will then only ad feed when the hopper is empty.
